

For tablet deployment in your cake shop kitchen:

To access from tablets on the same network:

1. Find your Mac Mini's IP address: In Terminal, type:

```
ifconfig | grep "inet " | grep -v 127.0.0.1
```

2. Access from tablets:

- Connect tablets to same WiFi as Mac Mini
- Open browser on tablet
- Go to: `http://[YOUR-MAC-IP]:3000`
- Example: `http://192.168.1.100:3000`

For production deployment:

You'll want to either:

- **Deploy to cloud** (Vercel, Netlify) for HTTPS (required for camera)
- **Set up HTTPS locally** on Mac Mini
- **Use iPad/tablet directly** connected to Mac Mini

Current status:

- ✓ Kitchen Scanner working on Mac Mini
- ✓ Ready for tablet testing
- ✓ Ready for Airtable integration

Want to:

1. **Test it on a tablet first?** (Find your Mac IP and test)

2. **Connect to Airtable now?** (Add real data, sync)
